

Lesson Practice Problems

The Samuel family went on hiking trips this year and recorded the distances on a line plot. If the family wants to set a goal hike 3 times the distance they hiked this year how many kilometers would they need to hike next year?

The Samuel family went on hiking trips this year and recorded the distances on a line plot. If the family wants to travel the same distance next year by going on four trips with each trip being the same distance, how many kilometers would each hike need to be?
